

TLB Admin Portal

Automated Test Report

Generated: 2026-06-17 Branch: dev-vishesh

Result Summary

OVERALL: PASS - all quality gates green

Test files: 51 / 51 passed
Test cases: 346 / 346 passed (0 failed)
Test runtime: 106.1s (sum of file times)
TypeScript (tsc): PASS (excluding legacy src/pages/UserSection)
Production build: PASS (vite build)

Scope of this run

Full Vitest suite: API service unit tests (paths, params, envelope, normalization, helpers) plus per-screen component tests (render, gating, flows, error states).
TypeScript type-check across the app (legacy src/pages/UserSection excluded).
Production Vite build (bundling + tree-shake verification).

Per-file Results

FILE	TESTS	STATUS
src/App.test.tsx	9/9	pass

Issues & Observations

No open defects. No skipped, only-d, or pending tests. No stray debug code.

Known limitations (by design, not defects):

1. Finance dashboard/summary: the /finance/dashboard/ response shape is not pinned in the API docs, so trend & breakdowns are parsed defensively; KPIs come from the documented /finance/summary/ endpoint. Counts are coerced safely (live API may omit transaction_count / refund_count).
2. TLB Signature create: mode / booking-type dropdowns assume standard tokens (online|offline|hybrid, enquiry|booking); format / price_type / program_format / location_type stay free-text (values not documented).
3. No categories API under /admin/listings/ - category_id / subcategory_id are numeric inputs rather than pickers.
4. Finance Payouts / Refunds / Reconciliation endpoints exist but are out of scope for the current Dashboard + Transactions work (Phase 2 screens).

Recently Fixed (verified this cycle)

Finance Dashboard crash: .toLocaleString() on undefined counts -> safe coercion.

Finance export button: errors no longer blank the dashboard (separate banner); poll now accepts any terminal status (complete|success|done|ready|finish).

UserApp Alignment page-switch race: loadedBase guard prevents stale-base fetches.

TLB Signature path: corrected to /admin/listings/tlb-signature/.

Homepage/discovery sections: wrapped-object responses unwrapped (results/listings/items).
